**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-9 are allowed. The following is an examiner's statement of reasons for allowance:

The prior art teaches evaluating performance of a MIMO network in terms of frame error rates based on instantaneous channel capacities (see applicant's response dated 12/05/07 on page 5 , lines 9-10).

On the other hand, the present applicant specifically teaches determining values of instantaneous channel capacity of a MIMO channel of a mobile user terminal at multiple time instants over a predetermined time, processing the values to determine a level of channel capacity such that any of the instantaneous channel capacity values is to a predetermined probability below that level, and looking up the level in predetermined calibration data of FER versus the channel capacity level so as to provide an FER value. These limitation, in conjunction with all other limitations, has not been disclosed, suggested or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
